

SIA VPOS EUROPE SETUP HANDBOOK FOR MAGENTO 2

FIRST USE

From the Magento backend you have to follow this path *Stores->Configuration->Sales->Payment Methods* to get access to the module configuration panel after installation.

If the module was correctly installed, you will find "Sia VPOS" among the payment methods list in the platform.

This module supports multi-languages and multi-currencies functionality

In order to use the module, you need the credential to access "Sia VPOS" service provided by Sia. You will get the credentials by email after subscribing a contract for the Acquiring E-commerce Sia Tandem – POS virtual service.

If you still don't have these credentials, please contact your bank to require them.

☺ Sia VPOS

This module allows you to connect your e-commerce site to the Vpos payment platform offered by Sia Europe for acceptance online payments with Visa and Mastercard cards issued by other banking institutions.

☺ Activation

☺ Configure account (production)

FIRST CONFIGURATION

The module is composed by different sections: ACTIVATIONS, CONFIG, CART SAVED, TEST SERVER SETTINGS, PRODUCTION SERVER SETTINGS

ACTIVATION

In this section is possible to enable/disable the payment method. If enabled, It will be shown on the frontend checkout page.

Activation

Enabled <small>[website]</small>	Yes	▼
-------------------------------------	-----	---

CONFIG

In this section you can choose

- the kind of operations accounting between the following options:
 - capture
 - authorize
- the language to use on the Sia payment page
- the sort order for payment method on customer checkout

Config

Payment Action (Accounting Mode) <small>[website]</small>	Capture	▼
If you choose deferred accounting, we remind you to activate the booking confirmation function on your bank's portal		
Locale <small>[store view]</small>	Italian	▼
The language to use on the Sia payment page.		
Sort order <small>[store view]</small>	10	

N.B.

If the deferred operations accounting option is chosen, the merchant has to access the back-office to confirm or delete the record of the operation by the terms expected on the SIA contract.

To access the backoffice you need to add “admin” to the website address.

TEST SERVER CONFIGURATIONS

In this section you will find the field already compiled with test credentials and pre-set to make test transactions. At the voice “enable test server” is possible to enable (yes) or disable (no) the test server, the default option is yes.

⌵ Configure account (test)

Enabled <small>[website]</small>	<input type="text" value="Yes"/>
Gateway URL <small>[website]</small>	https://virtualposttest.sia.eu/vpos/payments/main?PAGE=LAND
Shop Code <small>[website]</small>	1292812928P0002
Redirect Key <small>[website]</small>	rhcXLfT-ZAx8-UW--N6KC3FmfK-6eHHqz-vPDct8k2Gajmd9f3s-wNH4W-bYvej-ZXFE8EthL-avr5W-vRtr-fycEhqGrse6JN-v
Return Key API <small>[website]</small>	bZX7mTt-2X7FxrERs-uVTFebje4-4hNULRdaZh-s--dB6myAWYpqDMhc5JJQ7qs--9sv-s-SJzNF97--wU-zH7VBK6WttBrWT4xs

NB. Also in the case you are making use of the test server to experience the module, the Magento shop won't have to be under maintenance and has to be reachable from the internet.

PRODUCTION SERVER CONFIGURATION

In this section have to be configured the credentials access and keys provided by SIA. These informations are supplied by email from the XXXXXX@XXXX.XX. address.

⌵ Configure account (production)
